## Introducing LyncTouch!

HTD is excited to announce the upcoming release of a new keypad to replace our current model LyncPad for use with all [Lync whole-house audio systems](#).

LyncTouch will begin shipping to customers in late August/September. We're letting you know about it now so you can make an informed decision regarding your upcoming whole-house audio plans.

LyncTouch is about the size of a typical light switch and requires a dedicated single-gang space. The current LyncPad requires a dedicated dual gang space. LyncTouch can be installed in most existing single gang, open-back junction boxes or with a post-construction mud-ring.

As the name implies, LyncTouch is controlled mostly using a touch screen. There are only three physical buttons providing a minimalist aesthetic that easily blends with nearly every décor.

Pre-Order by August 9, 2019 for just **\$119**.

### Key Features of LyncTouch:

- Single gang, minimalist aesthetic, available in White, Black, and Light Almond
- Brilliant, multi-color 3.5" diagonal, HVGA touch screen
- Select source, adjust volume, mute, control the built-in MP3 player, place the zone in "Do Not Disturb" mode, quickly turn on all zones to the same source for "Party" mode
- Set treble, bass, and balance for the zone
- Select a unique color scheme and separately set the brightness of the screen when active and in sleep mode (including the option for the screen to be completely dark)
- Three physical buttons for common controls:
  - Button 1- power on/off, mute, power off all zones
  - Button 2- create a unique "favorite" for every LyncTouch. A single touch can turn on the zone, select your favorite source, and set volume to a predefined level
  - Button 3- press to talk (intercom) with all zones or any single zone
- Easily connect a [Standard Input Panel](#) to the back of the keypad, providing an inexpensive audio input conveniently located within the zone.
- Can be daisy-chained with another LyncTouch, [Analog Input Panel](#), [Digital Input Panel](#), or [Bluetooth Input Panel](#) in the same zone
- Patent-pending, simple installation design that quickly and easily mounts the keypad firmly against the wall without any visible screws or seams
